- Preparation of a four-monthly **labor conflict index** for Argentina based on Web Scraping and a Machine Learning model. I also wrote the reports for the publication of this index.

WORKING PAPERS

- **"Labor conflict and sectoral wage setting in Argentina"** with E. Levy Yeyati and D. Judzik.

We contribute to the analysis of the macroeconomic and labor market impact of labor conflict in two ways: we introduce a Labor Conflict Index (LCI), built at both the aggregate and the sectoral level, and estimate the effect of union bargaining power as captured by the LCI, on real wage determination. We find that conflict pays off in the short run: Across sectors, a 1% increase in bargaining power, as measured by the LCI, leads to a 0.5% - 2% increase in the average real wage.
